TECHNICAL SKILLS

Languages
Go, Python, Bash, C++

Cloud & Infrastructure
AWS, GCP, Alibaba Cloud, Tencent Cloud, Kubernetes, Docker, Terraform, Ansible, Helm, ArgoCD, Firecracker, Cloud Hypervisor, NGINX, Kong

Networking
OVN/OVS, BGP/ECMP (GoBGP), Envoy (xDS), WireGuard, gRPC, Software-Defined Networking

Data & Delivery
PostgreSQL, MySQL, MongoDB, Redis, etcd, AWS SQS, Google Pub/Sub, GitLab CI, Jenkins, Prometheus, Grafana, OpenTelemetry

EDUCATION

B.Sc. in Computer Science and Engineering
Jashore University of Science and Technology
2019 – 2024

PERSONAL PROJECTS

runbox
Hosted sandbox worker that runs submitted code as hostile: no credentials or repository access in the blast radius, each job in a network-less container with CPU, memory, process, and time limits. Jobs are claimed under a monotonic fencing epoch Postgres enforces on write, so a stale worker corrupts nothing.

Agent Cloud
Rust control plane and worker daemon running headless coding agents, one hardware-isolated microVM per session: live event streaming, park/resume on persistent volumes, per-org quotas, and deny-by-default egress with boundary-injected credentials.

Runtime Lab (runtimelab.io)
Self-hostable "build your own X" platform in Go and Next.js: GitHub OAuth, long-poll job queue, SSE log streaming, git smart-HTTP push-to-test; 464 stages across 5 languages.

PgFleet (GitHub)
Self-hosted PostgreSQL control plane in Go, an open-source RDS alternative: container-based provisioning, pgBackRest point-in-time recovery, streaming-replica HA with PgCat routing; 78% test coverage.

gatecraft (gatecraft.net)
Five Go services for web infrastructure: authoritative DNS with DNSSEC, reverse proxy with Coraza WAF, GeoIP blocking, Redis rate limiting, and Let's Encrypt certificates.

SUMMARY

DevOps and Platform Engineer specializing in cloud infrastructure and distributed systems: Kubernetes operators and internal developer platforms, Firecracker microVM infrastructure with software-defined networking, and real-time systems supporting 500,000 concurrent connections. Ships production Go and operates AWS, GCP, Alibaba Cloud, and bare-metal environments at scale.

EXPERIENCE

DevOps Engineer II
Jan 2026 – Present
Lotus's (CP Axtra) — *Bangkok, Thailand (Remote)*

- Designed and built components of an Internal Developer Platform (IDP): custom Kubernetes controllers/operators in Go for ArgoCD RBAC automation, resource reconciliation, and platform-level access management; extended ArgoCD with GitOps-based application lifecycle features and managed multi-environment deployments via ArgoCD and Helm.
- Operated production infrastructure across AWS, Tencent Cloud, and Alibaba Cloud; designed secure cross-cloud site-to-site VPN connectivity and executed production RDS migrations with validated backup chains and minimal disruption.
- Designed an internal logging platform processing petabyte-scale logs, improving observability and troubleshooting efficiency across enterprise systems.
- Managed the SSL/TLS certificate lifecycle across enterprise platforms using AWS Certificate Manager, covering provisioning, renewal, validation, and production service integration.
- Worked with distributed messaging systems including Google Pub/Sub and AWS SQS for reliable event-driven communication and service integration.
- Integrated Authentik-based centralized IAM across internal platforms; deployed NetBird Zero Trust VPN for engineering teams; maintained Jenkins CI/CD pipelines for multi-environment releases.

Site Reliability Engineer
Dec 2024 – Dec 2025
Pathao Ltd — *Dhaka, Bangladesh*

- Architected and optimized TURN, signaling, and WebSocket infrastructure supporting up to 500,000 concurrent connections for a high-demand real-time internal service.
- Engineered Infrastructure as Code with Terraform on GCP to automate provisioning, scaling, and lifecycle management of cloud resources across environments.
- Built and maintained GitLab CI/CD pipelines for a large-scale monorepo, enabling seamless multi-environment deployments via Helm charts.
- Developed custom Kong API Gateway plugins to extend gateway functionality for service-specific requirements.
- Built Grafana observability dashboards with anomaly alerting; collaborated across teams to resolve production incidents, deployment failures, pipeline bottlenecks, and network-level issues.

Backend Engineer
Jun 2023 – Dec 2024
Confidential — *Dhaka, Bangladesh*

- Contributed to building a public cloud from scratch on bare metal: a Go control plane provisioning Firecracker microVMs, multi-tenant SDN (OVN/OVS, Geneve), and BGP/ECMP anycast service exposure.
- Built a Kubernetes playground on Firecracker microVMs with software-defined networking for hands-on labs.
- Provisioned and operated bare-metal Kubernetes clusters end to end with horizontal pod autoscaling, secrets management, and NGINX-Ingress; exposed services externally via Cloudflare Tunnel.
- Implemented GitOps-based CI/CD for customer microservice applications using on-premise CI solutions and ArgoCD continuous deployment, maintaining security best practices.
- Designed high-availability backends with gRPC, Redis-backed Pub/Sub queues, and state-machine workflows at both the application and database level.
